

WEB APP MASTER TRAINING MANUAL

Studio Tunnel

Operations & Workflow

Sync

The complete onboarding guide to bookings, pipeline tasks, live time tracking and instant push notifications — for every colorist, assistant, conformist and line producer on the floor.

REVISION
DATE
**31 August
2026**

PREPARED BY
**Samiran Sonowal,
COO**

DISTRIBUTION
**Internal — All
Studios**

CEO / COO

Line Producers

Colorists

Assistant Colorists

Conformists

What's inside

Seven sections, front to back — from installing the app on day one to troubleshooting the edge cases six months in.

01	Welcome & System Overview What Studio Tunnel is, how the pieces connect, and who it's built for.	03
02	Team Directory & User Code Matrix Every user code, role and studio assignment on the roster.	04
03	Mobile Installation Quick-Start Installing the PWA to your home screen on iOS and Android.	05
04	Push Notifications (ntfy) Setup Instant lock-screen alerts for tasks, bookings and QC — no login required.	06
05	Line Producer SOP — Bookings & Task Dispatch Scheduling suites and moving work through the pipeline board.	07
06	Artist SOP — Time Tracking & QC Submission Clocking in, running task timers, and handing off for review.	09
07	Troubleshooting & FAQ Matrix Fast answers to the questions that come up in the first week.	10

1 WELCOME & SYSTEM OVERVIEW

One board, every studio, live.

Studio Tunnel Sync is the studio's operations and workflow layer — it replaces scattered WhatsApp threads and spreadsheets with one live board that every colorist, assistant, conformist and line producer works from.

APPLICATION

Studio Tunnel Ops & Workflow Sync (SYNC_ST)

WEB ADDRESS

`sync.studiotunnel.com`

FORMAT

Progressive Web App — installs like a native app, no App Store needed

How it's wired together

Every action in the app — a new booking, a task moving stages, a clock-in — writes to a real-time Firebase backend and syncs onward to Google Sheets and the studio's BigQuery data warehouse for reporting. Lock-screen alerts are delivered instantly through **ntfy.sh**, so nothing sits unread in an inbox.

Real-time Firebase

Google Sheets sync

BigQuery warehouse

ntfy.sh push alerts

Installable PWA

Who this manual is for

Executive Leadership

CEO / COO — full visibility across Control Center, bookings and financials.

Line Producers

Own the booking calendar and dispatch every pipeline task.

Colorists & Assistants

Sr. Colorists, Colorists, Assistant Colorists, Conformists — the daily task queue and timers.

WHY IT MATTERS

Accurate clock-ins and task timers sync straight into studio billing and BigQuery metrics — the time you log is the time the studio bills. Treat the timer like a stopwatch on the clock, not a formality.

2 TEAM DIRECTORY & USER CODE MATRIX

Know your user code.

Your user code is your identity across the app, ntfy channels, and every task assignment. It's how the system — and your teammates — find you.

CODE	NAME	ROLE	ROOM / DEPT
u1	Yash Soni	Sr. Colorist / CEO	Studio 01
u3	Samiran Sonowal	Colorist / COO	Studio 03
u2	Sujith Vijayan	Sr. Colorist	Studio 02
u4	Manoj Sahu	Colorist	Studio 03
u11	Altamash Ansari	Line Producer	Production Office
u0_b	Prakash Jaiswal	Line Producer	Production Office
u10	Arjun Kohli	Assistant Colorist	Assist Studio
u6	Ayush Dalvi	Assistant Colorist	Assist Studio
u9	Vijay Nool	Assistant Colorist	Assist Studio
u5	Golu Saha	Conformist / Floor Mgr	Data & Conform
u12	Aaditya Kamble	Conformist	Data & Conform

WHERE YOUR CODE SHOWS UP

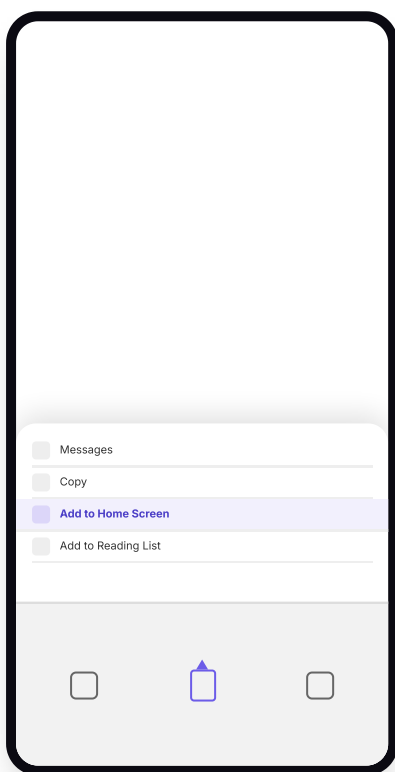

Your user code doubles as your personal ntfy topic — `studio-tunnel-<your code>` — and appears next to your name anywhere the app needs to identify you, including on task cards with the (IN) clocked-in tag.

3 MOBILE INSTALLATION QUICK-START

Put it on your home screen.

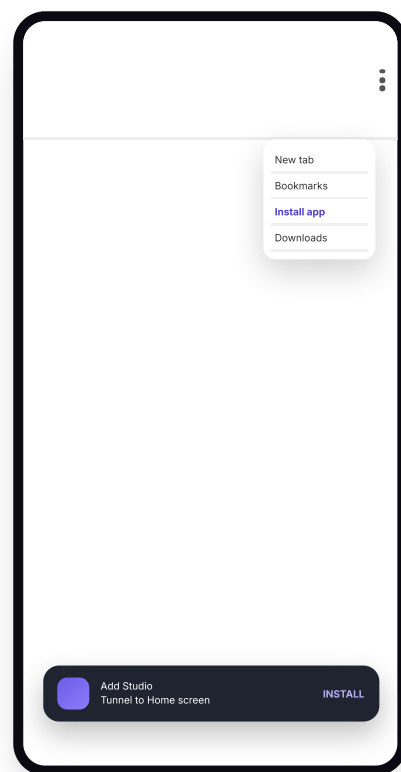

Studio Tunnel installs like a native app straight from your phone's browser — full screen, no address bar, no App Store. Do this once on day one.

🍏 iOS — Safari

- 1 Open **Safari** and go to sync.studiotunnel.com.
- 2 Tap the **Share icon** in the bottom bar (square with an arrow).
- 3 Scroll the sheet and tap **"Add to Home Screen."**
- 4 Confirm the name as **"Studio Tunnel"** and tap **Add**.

🤖 Android — Chrome

- 1 Open **Chrome** and go to sync.studiotunnel.com.
- 2 Tap the **: menu** top-right, or the install banner at the bottom.
- 3 Select **"Install app"** (or "Add to Home screen").
- 4 Tap **Install** to confirm.

RESULT

Once installed, Studio Tunnel opens full-screen from your home screen icon like any other app — zero browser chrome, and it keeps working after you install **ntfy** in the next section for lock-screen alerts.

4 PUSH NOTIFICATIONS (NTFY) SETUP

Never miss a handover.

Studio Tunnel uses **ntfy.sh** for instant, battery-efficient lock-screen alerts — no account, no email clutter. Set this up right after installing the app.

1

Download ntfy — free, on the App Store or Google Play.

2

Subscribe to your personal topic and studio channels below.

3

Test it from the bell icon in the app header.

Open the bell icon → this is exactly what you'll see

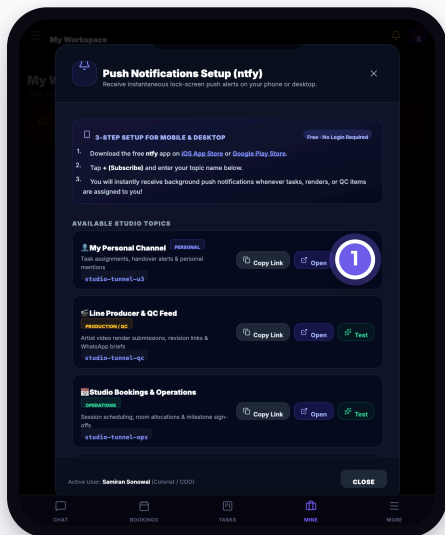

Fig 4.1 — Push Notifications Setup, opened from the bell icon

SUBSCRIBE TO THESE THREE

- 1 **My Personal Channel** — `studio-tunnel-<your code>`. Task assignments and handover alerts meant for you specifically. Tap **Test** to confirm it rings.
- 2 **Line Producer & QC Feed** — `studio-tunnel-qc`. Artist render submissions and revision links.
- 3 **Studio Bookings & Operations** — `studio-tunnel-ops`. Session scheduling and room allocations.

ALSO SUBSCRIBE

Colorists and producers should add their own channel in the ntfy app manually using **Copy Link** or by typing the topic name — it's free and needs no login.

5 LINE PRODUCER SOP — STUDIO BOOKINGS

Fill the suites, keep it visible.

Line Producers own room allocation across Studio 01, 02 and 03. Every booking you create broadcasts instantly to the assigned colorist and the `studio-tunnel-ops` channel.

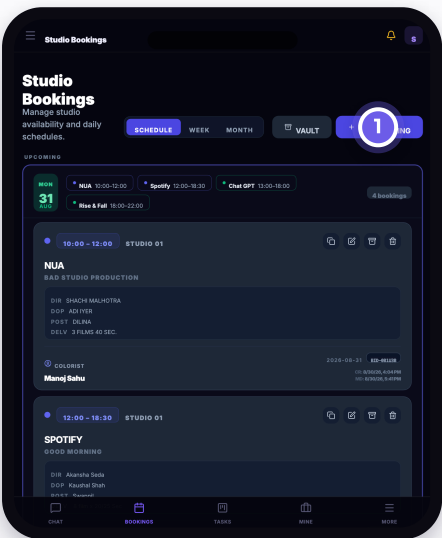

Fig 5.1 — Studio Bookings, Schedule view

BOOKING WORKFLOW

- 1 Open the **Bookings** tab (📅) from the bottom nav or sidebar.
- 2 Switch between **Schedule**, **Week** and **Month** to check available suites.
- 3 Tap **+ Add Booking** to open the booking form.
- 4 Every card shows the studio, time block, client, deliverables and assigned colorist at a glance — plus **Copy**, **Edit**, **Vault** (archive) and **Delete** actions on the right.

The booking form

Complete every field before saving — this is what the colorist, the client, and the billing sheet will all read from.

- 1 **Client & project** — production house, project code and name.
- 2 **Contacts** — director, DOP, post producer, client phone/email.
- 3 **Billing treatment** — commercial rate or FOC, and deliverables.
- 4 **Room & date** — pick the studio suite and the session date.

SESSION STATUS

Mark each booking **Confirmed**, **Tentative (Pencil)**, or **Hold** so the floor always knows how firm a slot is.

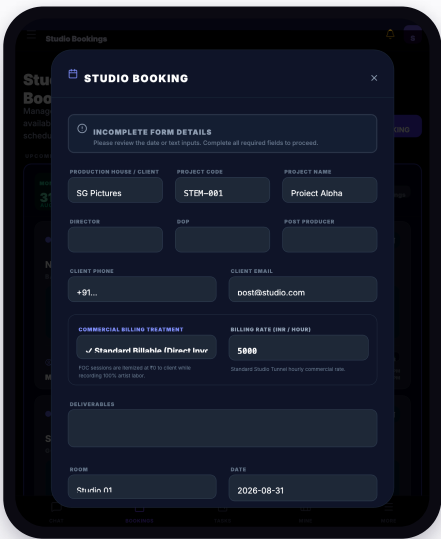

Fig 5.2 — New Studio Booking form

5 LINE PRODUCER SOP — PIPELINE TASKS

Conform → Assist → Grade → Delivery Sync.

Every deliverable moves through four standardized stages on the Studio Pipeline board. Dispatch it, and the assigned artist gets an instant push alert.

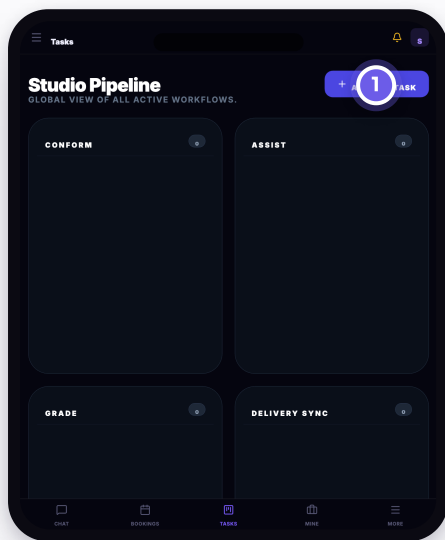

Fig 5.3 — Studio Pipeline board

DISPATCHING A TASK

- 1 Open the **Tasks** tab — the pipeline board with four columns.
- 2 Tap **+ Add New Task**.
- 3 Give it a clear title — e.g. *"Master XML Conform V2"* or *"Hero Grade Pass."*
- 4 Link it to the active project, write the brief, and pick the **Starting Phase**.
- 5 Assign to a teammate — the **(IN)** tag shows who's currently clocked in.

The new task form

Leave **Assign To** as "Leave Unassigned (LP Queue)" if you want any available artist to pick it up — otherwise route it straight to the person clocked in and ready.

REASSIGNING

Use the **Reassign** button on any card to hand a task off to the next stage or a different artist — the pipeline stage updates automatically.

HEADS UP

Once created, the task appears instantly on the live board for everyone — double-check the brief and phase before hitting Create.

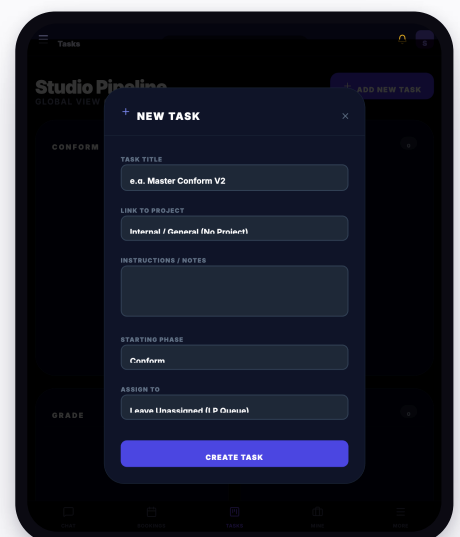

Fig 5.4 — New Task form

6 ARTIST SOP — TIME TRACKING & QC HANDOVER

Clock in like it's billing — because it is.

For Conformists, Assistant Colorists and Colorists: accurate time logs sync straight to studio billing and BigQuery. This is the daily loop, start to finish.

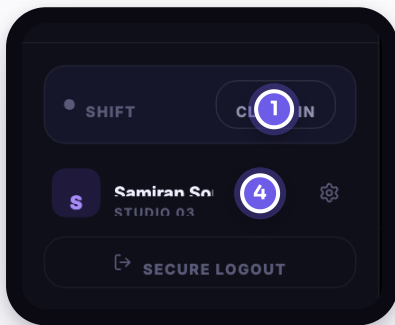

Fig 6.1 — Sidebar footer: Clock In & alerts

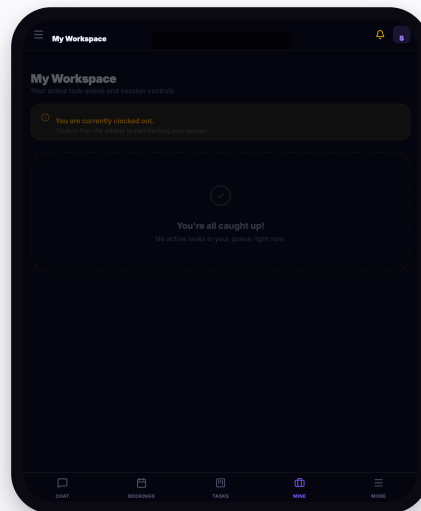

Fig 6.2 — My Workspace, clocked-out state

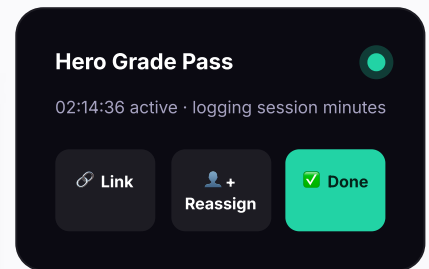

Fig 6.3 — Illustration: a task card once its timer is running (green pulse)

The daily loop

- 1 Clock In** — tap **1** **Clock In** in the sidebar the moment your shift starts.
- 2 Open your queue** — go to **My Tasks / My Workspace** to see what's assigned to you.
- 3 Start the timer** — the instant you open the project in Resolve, Baselight or Avid, tap **▶ Start Timer** on the card. It turns green with an active pulse.
- 4 Submit for QC** — when a cut is ready, tap **Link**, paste the Frame.io or Drive review link with notes. This fires a high-priority alert on [studio-tunnel-qc](#).
- 5 Mark Done** — tap **✓** to stop the timer, log the exact duration, and advance the task to the next phase automatically.

LIVE VISIBILITY

Anyone can open **Live Team Status** from the sidebar (**4** bell area) to see who's online, their clock-in time, and current queue in real time.

7 TROUBLESHOOTING & FAQ MATRIX

Quick answers, first week.

The questions that come up most often when a new teammate joins the board.

I forgot my password.	From the sign-in screen, use the same " First time? Click here to set up password " flow with your registered user code or studio email to set a new one.
I'm not getting lock-screen alerts.	Open the ntfy app and confirm you're subscribed to <code>studio-tunnel-<your code></code> . Then use the bell icon → Test in the web app to fire a check alert. If it doesn't arrive, re-check the topic spelling — it's case-sensitive.
"Add to Home Screen" is missing on iPhone.	It only appears in Safari — Chrome or another browser on iOS won't show it. Open the link in Safari first.
I clocked in by mistake / forgot to clock out.	Ping your Line Producer or COO — clock events feed billing directly, so corrections are made from the admin side, not self-edited.
A task isn't showing the right assignee.	Use Reassign on the card to correct it — this keeps the pipeline stage and notification history intact instead of deleting and recreating the task.
My QC submission link didn't notify the producer.	Confirm the link was pasted into the task's  Link field (not the general chat) — only that field triggers the <code>studio-tunnel-qc</code> push alert.
Who do I contact for access or device issues?	Log it under IT Tasks in the sidebar so it's tracked, or reach your studio's Line Producer directly for anything blocking a live session.

STILL STUCK?

Every screen in this manual reflects the live app at `sync.studiotunnel.com` — if what you see differs, check for an app update banner first, then flag it to the COO.
